

Certified Pressure Relief Valves

Pressure relief valves must be incorporated into the blast machine system to meet global safety standards. Elcometer's certified pressure relief valves can be easily fitted to the air manifold which is fitted to the RCV4000+ remote control valve. Pressure relief valves are designed to discharge the compressed air in the blast machine upon reaching the crack pressure.

Part Numbers

Part Number	Description
MT28606	12bar (174psi) Certified ½" (13mm) Pressure Relief Valve, BSP Thread
MT28607	15bar (217psi) Certified ½" (13mm) Pressure Relief Valve, BSP Thread
