

## Moisture Separator

The highly efficient Elcometer Moisture Separator prevents moisture and oil from the compressor entering the blast machine. Eliminating up to 98% of the moisture and oil from compressed air, the moisture separator stops the abrasive becoming damp and clogging the blast machine.

Rated to a working pressure of 15bar (217psi) the Elcometer Moisture Separator has a glass viewing area to ensure it does not break under pressure.

### Part Numbers

Part Number	Description
<b>MT28617</b>	Elcometer 1½" (38mm) Moisture Separator Assembly for Elcometer Abrasive Blast Machines

Moisture Separator
